THE DECK

A cozy pixel-art office for a remote team of 30

The Suitors · Andrii Butko, Ivan Baranov, Varya Tikhonova

T1A Hackathon · Cyprus Odyssey · Oct 13–16, 2026

Category: Inside the Crew

THE WHOLE FLOOR

THE PROBLEM

- Fully remote, 30 people: nobody sees who is around
- Who is deep in focus? Who is free for a two-minute question?
- Every question becomes a scheduled call or a Slack message that waits
- Video shows people only once a meeting has started
- Status dots don't say "come over"

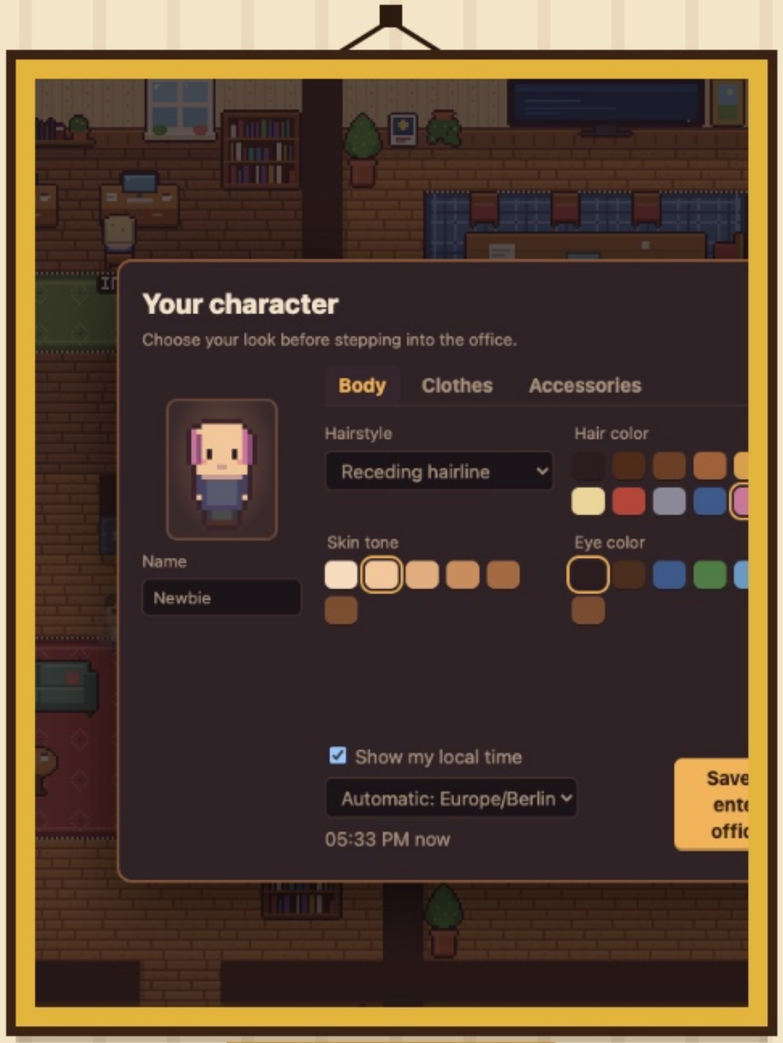

What an office gives back

- Feeling together while working from home
- Coffee-room chats you can just walk into
- Seeing someone read, play, or take a break
- Birthdays, seasons and notices everyone sees
- Clubs: the Book Club, the Arcade crew
- Who's on vacation, at a glance

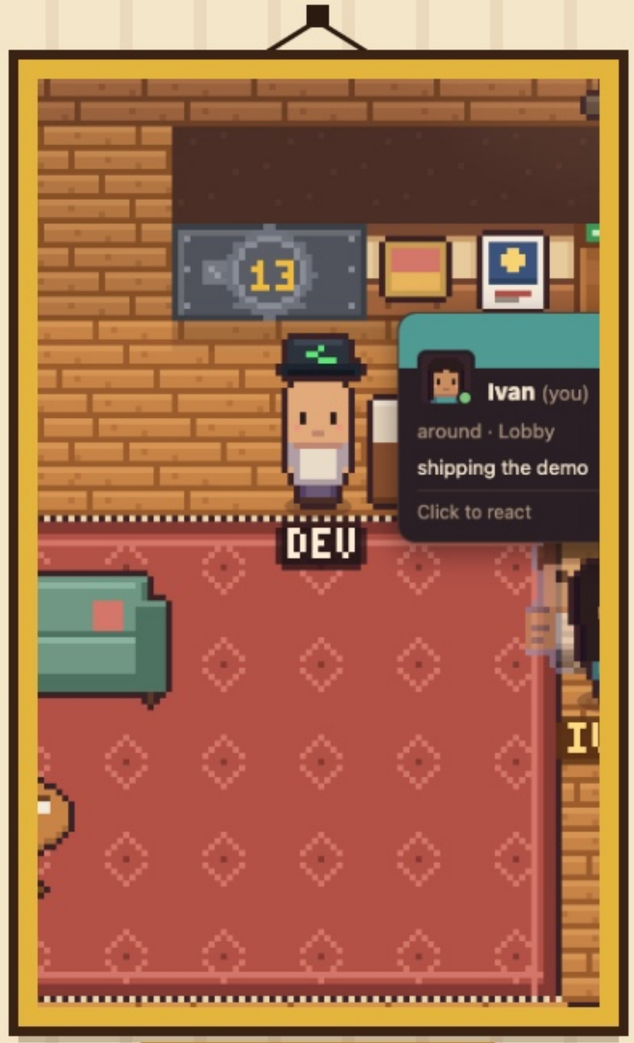

MAKE YOURSELF

- Pick hair, skin, eyes and clothes
- A **nameplate** under you, a status line over you
- Your **local time** on your hover card
- Hats go in your pockets: from the Lobby rack, or gifted

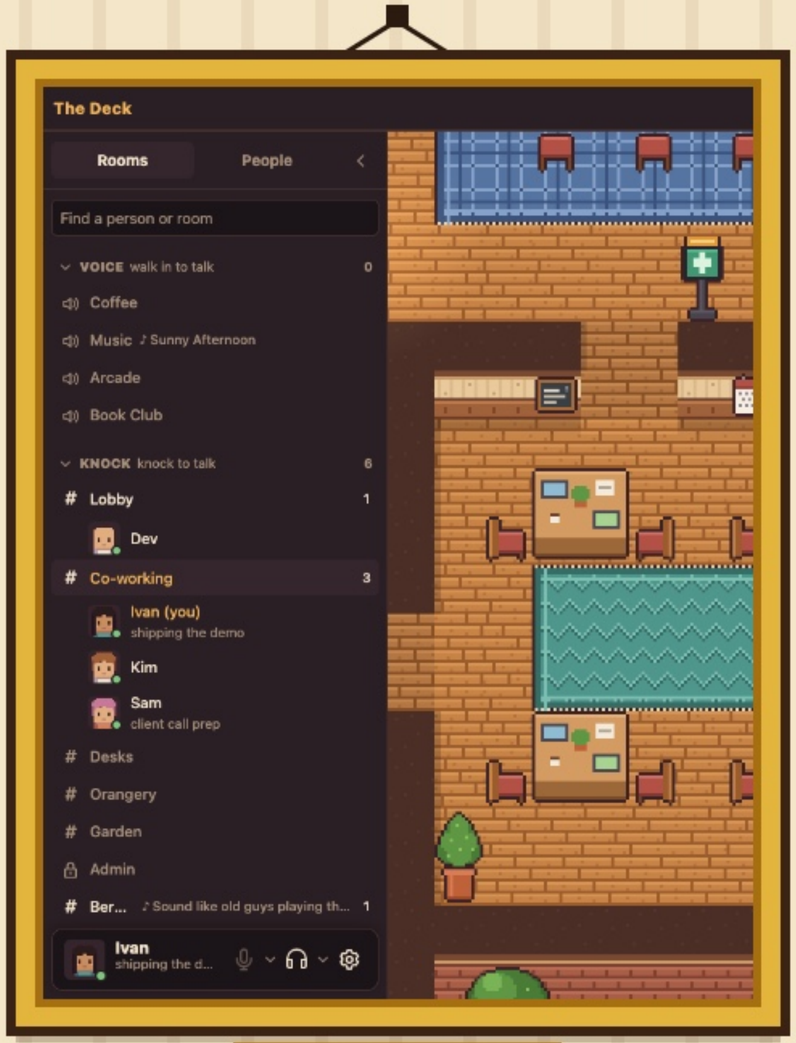

CHARACTER

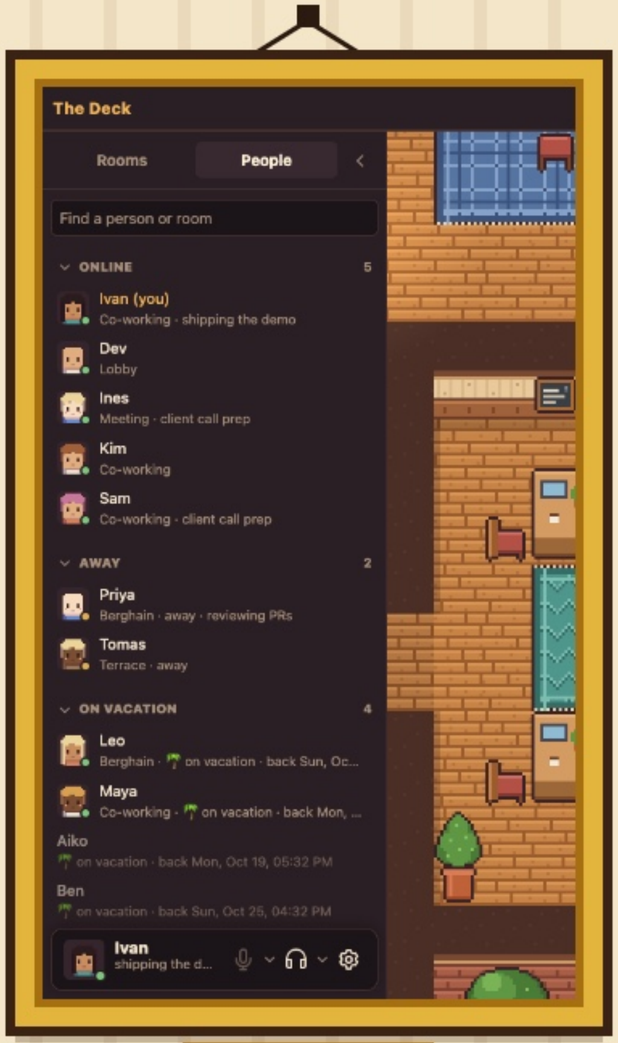

HOVER CARD

WHO'S AROUND

- One shared floor, 18 rooms. Click to walk: everyone sees the same walk
- Away, in a call, in a meeting, reading: visible on the map
- A Discord-style sidebar: rooms as channels, people under the room they stand in
- Home desk with a plant that grows when you show up

THE FLOOR

PEOPLE

KNOCK TO TALK

- Click a person, knock. A "!" pops over their head
- Accept starts built-in voice (WebRTC) or a Google Meet room
- Focus rooms block knocks: busy people get a Later list
- The Mac menu bar app shows a native knock card

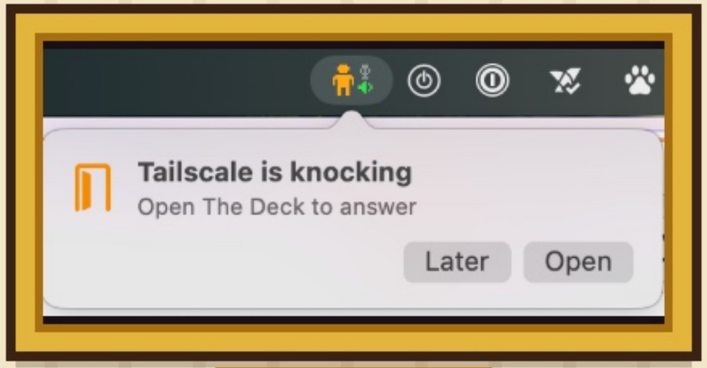

KNOCK

IN A CALL

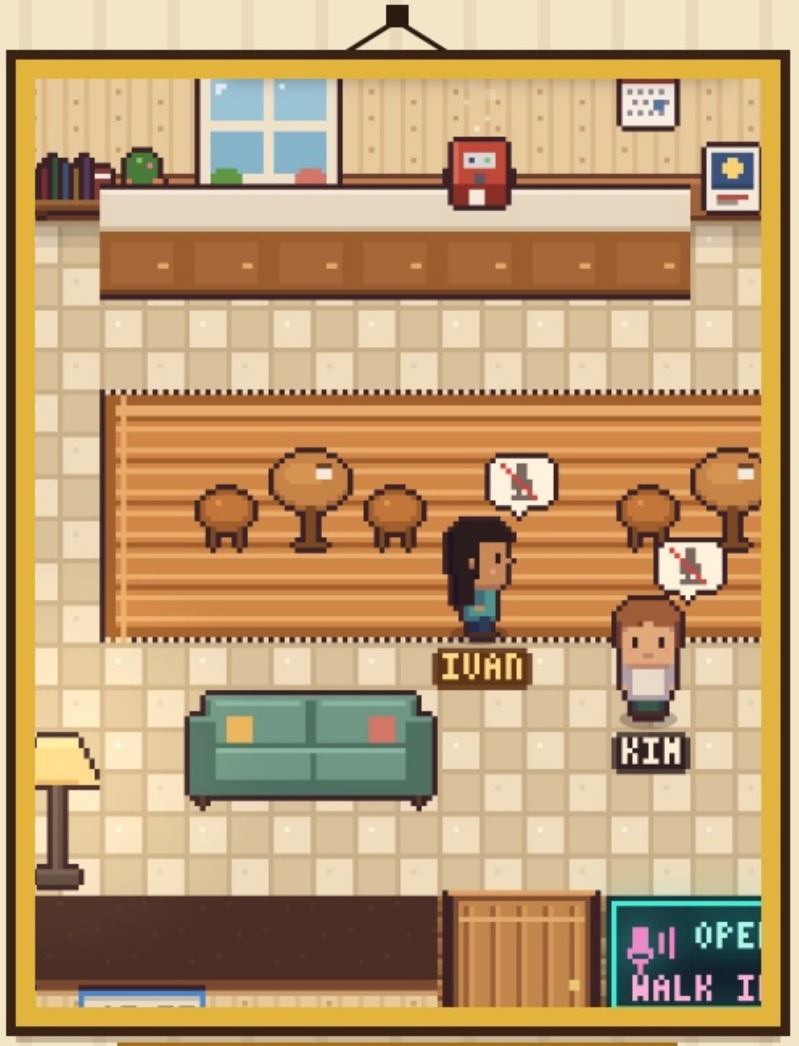

ACCEPT / LATER

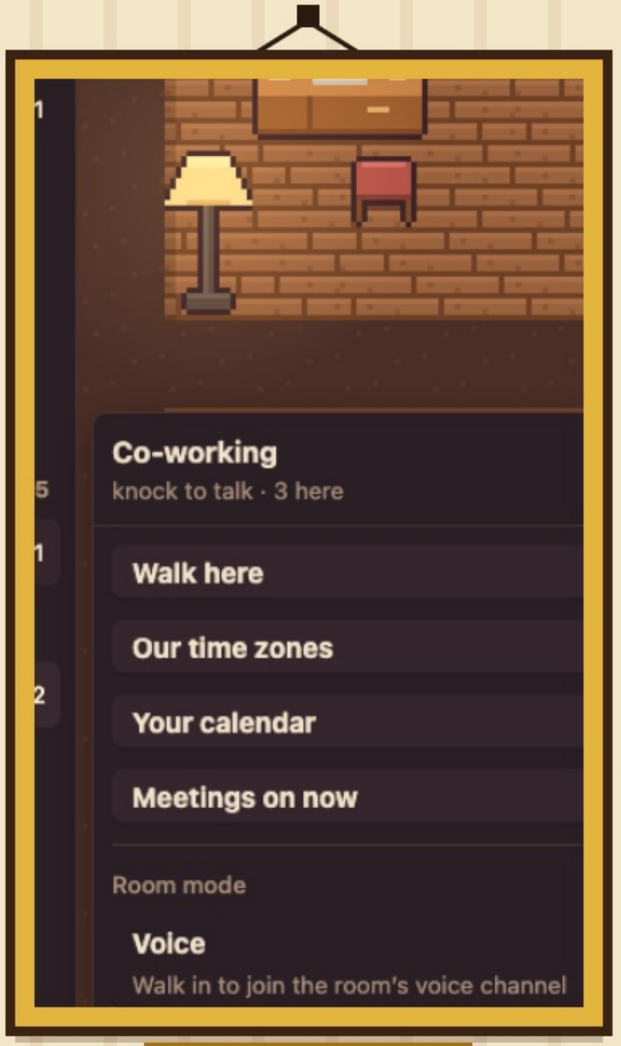

MAC APP

ROOMS THAT BEHAVE LIKE ROOMS

- **Open voice** rooms: walk into Coffee, Music, Arcade or Book Club and you're in the conversation
- Sound fades with distance, muffled by walls and doors
- Quiet rooms, knock rooms, busy rooms. Admins switch a room's mode live
- Room rules are data, not code

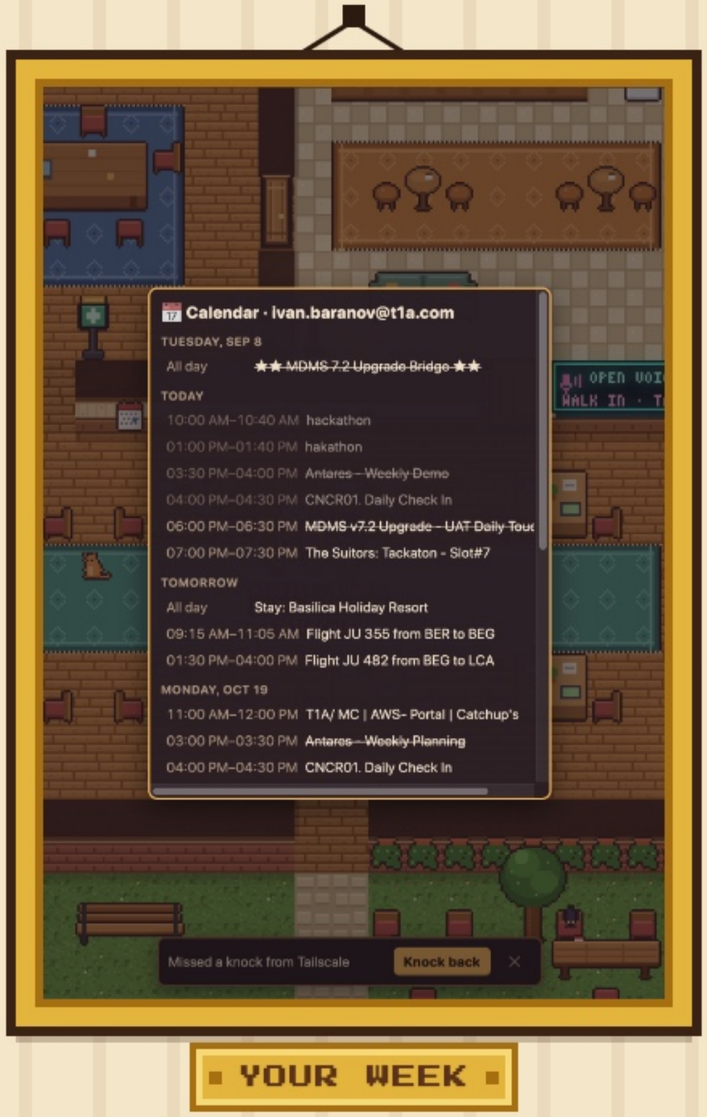

COFFEE: OPEN VOICE

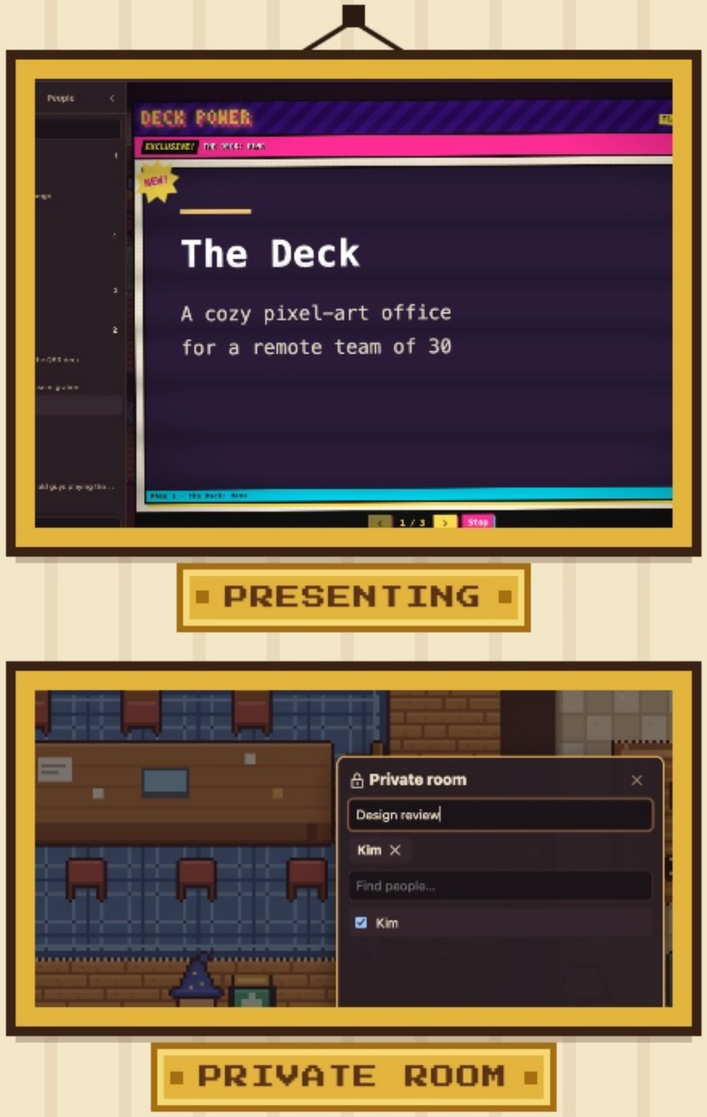

ROOM MODE

CALENDAR-AWARE

- Connect Google once. Wall calendars show your week
- A heads-up a minute before a meeting: Go puts you in a private copy of the Meeting room with the other guests
- Each knock call gets its own Meet room
- The wall screen shows PDF slides or a shared screen: a kiosk books private rooms

YOUR WEEK

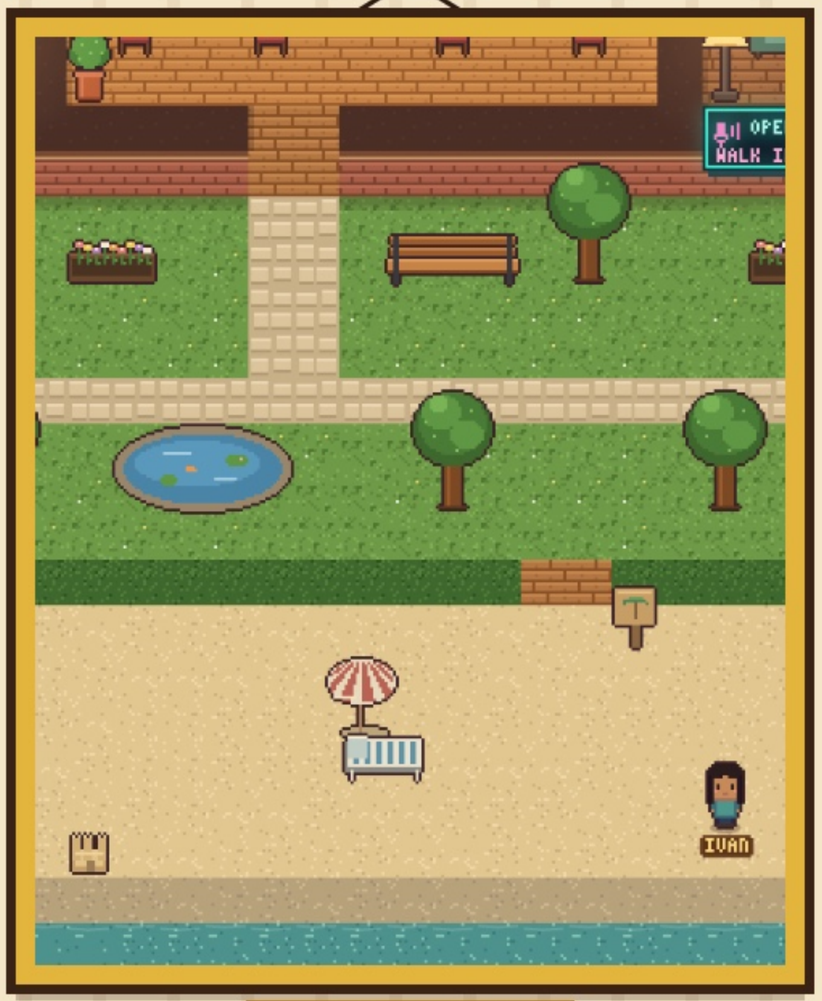

PRESENTING

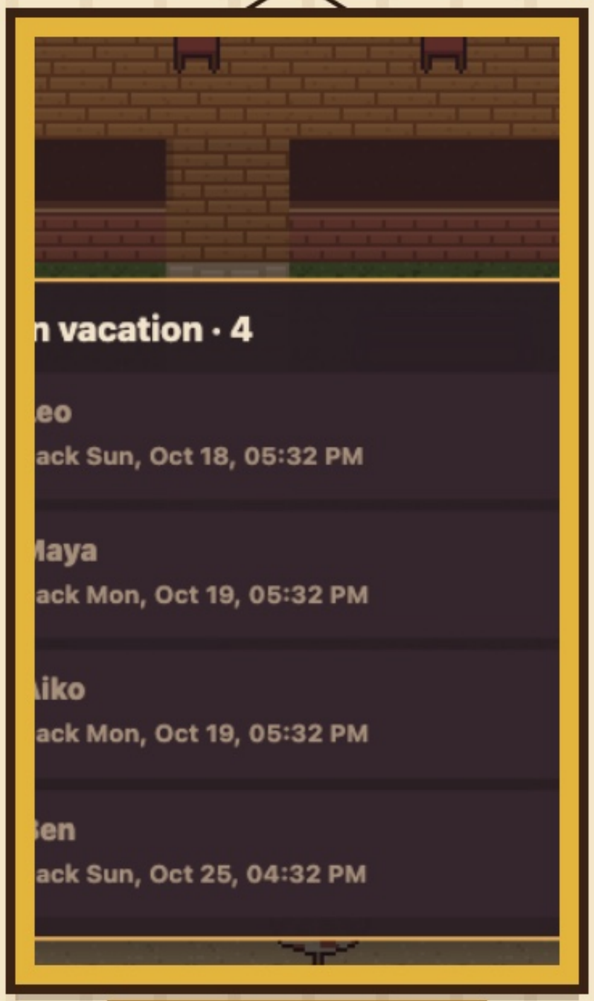

PRIVATE ROOM

WHO'S ON VACATION

- Calendar absences put people on the beach or in the mountains
- A 🌴 nameplate and the return date on the hover card
- "On vacation" group in the sidebar: the whole team, at a glance
- Vacationers still get messages, knocks stay quiet

THE BEACH

ON VACATION

PLACES TO BE TOGETHER

- A shared **Jukebox** (CCO library) and a LoFi Girl TV, heard only in the room
- Playable keys, drums and bass
- A **Library** where everyone sees you reading; shared articles by topic
- Book Club, lunch tables as small voice rooms

MUSIC ROOM

LIBRARY

BOOK CLUB

LUNCH

PLAY TOGETHER

- Arcade: a co-op platformer with rollback netcode, party games, weekly boards
- Game Boy homebrew cabinets, scores verified by the server
- A game table: chess, draughts, dominoes, Last Card
- Achievements and a trophy screen

GAME TABLE

GAME BOY

ARCADE

CO-OP

TROPHIES

A BIT OF OFFICE LIFE

- A cat, a dog, a cleaner who takes away forgotten cups
- A yoga mat with **personal reminders**: water, stretch, Pomodoro
- Hats, a reception bell, cocktails, a club, a hidden dungeon

The games and pets are there so people **want** to open it in the morning.

DUNGEON

HOW IT'S BUILT

- One Node process is the **source of truth**: clients send intents, it broadcasts events
- Deterministic clients: the same A* path everywhere, so a walk is one message
- One typed protocol file: map and rooms are generated data: all art is procedural
- Canvas floor, React chrome, WebRTC voice, Web Audio sound

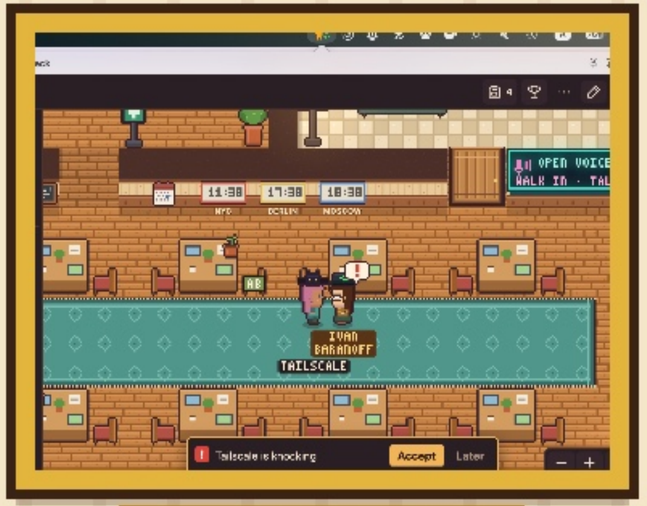

Browser · Mac app

React chrome, canvas engine, store + socket, WebRTC mesh, soundscape

intents →
← events
WebSocket

Node server

World: users, moves, knocks, calls, rooms, games. Validates everything. JSON state every 30 s

MAC MENU BAR

EDIT MODE

PHONE

30 HOURS, 3 PEOPLE

- Kickoff token in the first commit, prod live by lunch on day 1
- Humans chose features and wrote specs; coding agents wrote most of the code in parallel worktrees
- Every merge: tests, typecheck, build. Prod runs the head of main, enforced by the deploy script
- Used by the team all hackathon long

150+ pull requests merged	**600+** automated tests	**18** rooms on one floor
5 instances: prod, demo, 3 test	**0** third-party art: every sprite is generated	**1** process, one JSON file, no database

Known limits

Voice is a P2P mesh: 8 per call, 12 speakers per room. Google features run on prod only. Away is manual. The Mac app is self-signed. Fine for 30 people, not for thousands.

WHAT COMES NEXT

- **Secret Santa**: a gift box on your desk, a name drawn from the team, a reveal party in the Lobby
- **Birthday celebrations**: cake and balloons at the desk, a banner in the Lobby
- **Seasonal areas and notices**: winter décor, a skating pond, an HR board for news
- **SecondStack Q&A robot** in the Library: ask about T1A's knowledge, get an answer in a bubble
- Backlog: sign-in without NetBird, automatic away, Slack status sync, TURN/SFU
